ClaroBill.

Find errors in your medical bill.

Public beta · clarobill.com

Sandra Jirongo · May 2026

80% of US medical bills contain at least one error.

80%

of medical bills contain at least one error.

$1,300

average overcharge on bills above $10K.

1.2B

medical bills issued in the US every year.

Patients have no way to spot the errors. Human advocates who can charge 25 to 35 percent of recovered savings, and take six weeks. The result: $30 billion a year in unrecovered patient overcharges.

Sources: Medical Billing Advocates of America; U.S. GAO.

ClaroBill audits any bill in three minutes.

01

Upload

Bill in PDF or photo.

02

Audit

Deep audit runs against published hospital rates and standard billing rules.

03

Dispute

Receive a detailed report and a ready-to-send dispute letter.

Free to analyze. Pay only when we find savings worth disputing.

The federal Hospital Price Transparency Rule went live in 2021.

2021

the year the data became public.

Every U.S. hospital is now legally required to publish their negotiated rates with every insurer in machine-readable form.

The data is public. Almost no one has built a consumer product on it. The regulatory window is permanent.

Source: Centers for Medicare & Medicaid Services, Hospital Price Transparency Final Rule (CMS-1717-F2).

13,800 hospitals indexed.

13,800

hospitals in our pricing index.

524M

published rates queryable in seconds.

Year-partitioned

every bill audited against the rates in force on the service date.

ClaroBill is the first consumer audit engine running directly against the federally mandated pricing data. Every finding cites a specific dollar in published source data. No human guesswork.

Source: Centers for Medicare & Medicaid Services Hospital Price Transparency datasets, ingested 2025-2026.

Citation-backed findings. Every dollar traceable.

Deterministic, not predictive.

EXAMPLE FINDING

CPT 99214

Billed amount

$850.00

Saint Michael's published Aetna rate

$96.84

DEFENSIBLE OVERCHARGE

$753.16

A 13-rule deterministic engine checks each line item against published rates, the hospital's own list price, billing-code combinations, and procedure-quantity edits.

AI handles only patient-facing language generation, never the inference itself.

60+ users in the first week. Zero marketing spend.

60+

unique users in the first week.

42

DAU peak on launch day, May 2, 2026.

30%

landing-to-second-page conversion.

17%

complete a full first session (avg 2h 41m to third pageview).

<100

bills processed in beta. Every engaged cohort wants the dispute letter.

All distribution organic so far. Twitter drove a third of traffic without paid ads.

Outcome-based pricing. The patient sees value before they pay.

Free	$14.99	$79.99	$129.99	$199.99
savings ≤ $20	savings $20 to $150	savings $150 to $750	savings $750 to $1,500	savings $1,500+
no fee, ever				

Human advocates: 25 to 35 percent of recovered savings.

On a $1,300 finding that's $325 to $455. ClaroBill delivers the same outcome for $129.99, in three minutes instead of six weeks.

Unit economics that scale.

UNIT ECONOMICS

~$70 weighted ARPU per paid bill.

30 to 40% expected free-to-paid conversion.

~$140 LTV (2 paid bills per active user per year).

~$25 CAC at scale (SEO + organic share).

~5.6x LTV / CAC ratio.

MARKET SIZE

$5B / year existing human-advocate market.

$30B / year unrecovered patient overcharges.

1.2B medical bills issued annually.

Sources: Medical Billing Advocates of America; U.S. GAO; CMS NHE.

From consumer wedge to billing-department-as-software.

TODAY

Consumer wedge.

Patient-facing audit and dispute letter. Live in beta.

NEXT

B2B API. Post-Demo Day.

Hospital billing teams, self-funded employers, insurance claims teams pay $50 to $200 per audit. $100M+ ARR opportunity at maturity.

END STATE

Billing departments are software, not floors of people.

ClaroBill becomes the audit infrastructure of U.S. healthcare billing.

Conservative projection.

PERIOD	PHASE	VOLUME	ARR
Year 1	*post-funding*	50 to 75K bills	**$1 to $2M ARR**
Year 3	*scale phase*	1M+ bills / year	**$30 to $50M ARR (consumer)**
Year 5	*platform phase*	5M+ bills / year	**$200M+ ARR (with B2B)**

Honest unknown: consumer free-to-paid conversion. Beta data supports 30 to 40 percent, but volume is under 100 bills. Confident range at 1,000+ bills.

Solo founder. Built every layer in three months.

Sandra Jirongo

Founder. Engineer. Berkeley Haas alumna.

Built the data pipeline, OCR, rules engine, frontend, payment flow, and AI-assisted dispute letters. Solo, in Oakland.

HIRING POST-FUNDING

Full-stack engineer (month 2).
Growth and SEO operator (month 3 to 4).

ADVISORY

In active conversation with Hubert Thieblot (Founders Inc).
